

Tables S1–S8

Modes of cultural mediation: How documentary genres shape the construction of Ukraine in American and German nonfiction

These tables document the units of analysis, the full results behind the article’s figures and summary tables, and the word lists. They are part of the repository that holds the data and programs; its `README.md` explains how to reproduce every number. Densities are per 1,000 words; intervals are 95% bootstrap intervals over a text’s units. Period codes: P1 before Euromaidan (to November 2013); P2 Euromaidan to 23 February 2022; P3 from 24 February 2022.

S1. Units of analysis

Each unit is a chapter, or a run of consecutive dated diary entries, of at least 1,000 words. *Period*: when the unit’s events take place. *Ukraine*: the events take place in Ukraine. Units marked *excluded* were shorter than 1,000 words and could not be merged within their period.

Table S1: The 120 units.

S6. Themes of the Ukraine-set text

Table S8: The 12 themes: our name and family, the most distinctive English and German words, and the share of each text’s Ukraine-set words (per cent). Diagnostics: mean silhouette 0.03 (passages of different themes are not sharply separated); agreement of the clustering across ten random starts, mean adjusted Rand index 0.46 (lowest 0.36; 1 would be identical partitions). Every statement about themes in the article holds in all ten runs.
